| EDUCATION                        | <b>University of California, San Diego</b> , La Jolla, CA<br><i>M.S., Computer Science</i><br><b>University of Science and Technology Beijing</b> , Beijing, China<br><i>B.E., Computer Science</i>  | <b>Sept. 2019 – Mar. 2021</b><br><b>Aug. 2015 – June 2019</b>  |
| RELEVANT PROFESSIONAL EXPERIENCE | <b>SambaNova Systems</b><br><i>Software Engineer</i> <ul style="list-style-type: none"><li>Co-designed and developed infra for large-scale DP and MP, supporting multi-dimensional DP, fine-grained data distribution management, and efficient cross-socket traffic planning.</li><li>Designed and developed infra for DP on heterogeneous hardware architecture at compile time, including bit-file packing and consistency checking infra. US patent granted.</li><li>Enhanced resource and performance modeling at compile time and extended compiler resource modeling for multiple architectures with different compute resources and memory bandwidth.</li><li>Developed a config development toolkit, which boosted the efficiency of config development by 10X. The toolkit was integrated into the main workflow and adopted by hundreds of applications.</li><li>Launched GUI for test coverage monitoring, making testing quality tracking much easier.</li></ul> <b>Aibee US</b><br><i>Research Intern</i> <ul style="list-style-type: none"><li>Designed and implemented a model that improves the vehicle Re-ID performance by considering pose. Increased performance from 85.4% to 97.3% on TPR@FPR=0.01. Converted the PyTorch model to a Caffe model and shipped it to intelligent parking lot production.</li><li>Developed an internal tool for new car model discovery using Re-ID architecture.</li></ul> <b>Tencent</b><br><i>Research Intern @ Tencent AI Lab</i> <ul style="list-style-type: none"><li>Participated in Virtual Host project, which aims at generating a virtual host for game streaming and weather broadcasting. Developed modules for face segmentation and alignment. Module adopted by a million-DAU mobile application.</li><li>Worked on developing a robust and efficient system for generating realistic videos with generative adversarial networks. Proposed a state-of-the-art face reenactment model.</li></ul> <b>Institute of Automation, Chinese Academy of Sciences</b><br><i>Research Intern @ National Laboratory of Pattern Recognition</i> <ul style="list-style-type: none"><li>Proposed a method of increasing the accuracy of gait recognition by heightening the frame rate with generative adversarial networks. The publication can be seen in <i>Frame-GAN</i>.</li></ul> | <b>Apr. 2021 – Present</b><br><b>June 2020 – Sept. 2020</b><br><b>Dec. 2018 – Aug. 2019</b><br><b>June 2017 – Sept. 2018</b> |
| SELECTED PROJECTS                | <b>Lego-Serverless Distributed Platform</b> <ul style="list-style-type: none"><li>Developed Lego-Serverless Platform, an event handling and function creation platform for modern serverless services.</li><li>Designed a two-level load balancing mechanism, a high-level round-robin load balancer, and a middle-level Raft load balancer. Responsible for implementing data pipeline and high-level load balancing. Designed and developed data infrastructure based on Kafka and CouchDB.</li><li>Lego-Serverless provides RESTful API for function and event CRUD. Additional management functions like user authentication and function authorization are supported too. The platform can handle 2,000 QPS based on single-node testing on AWS EC2 instance.</li></ul> <b>Distributed Storage System</b> <ul style="list-style-type: none"><li>Built a distributed storage system based on the Raft consensus algorithm using Golang.</li><li>Implemented leader election, file replication, and data persistence mechanisms. Designed RPC for communication between nodes. A crash recovery mechanism is implemented as well.</li></ul>   |  |
| SKILLS                           | <b>Frameworks and Tools</b><br>MLIR, PyTorch, Kafka, TensorFlow, OpenCV<br><b>Programming Languages</b><br>C++, Python, Golang, C, SQL, JAVA, Haskell  |  |
